Randomly selecting a projector without looking at the features, pros and cons, is not an ideal way to purchase the product. In this section, we address the common questions, doubts and misconceptions you might have before planning to buy a projector.

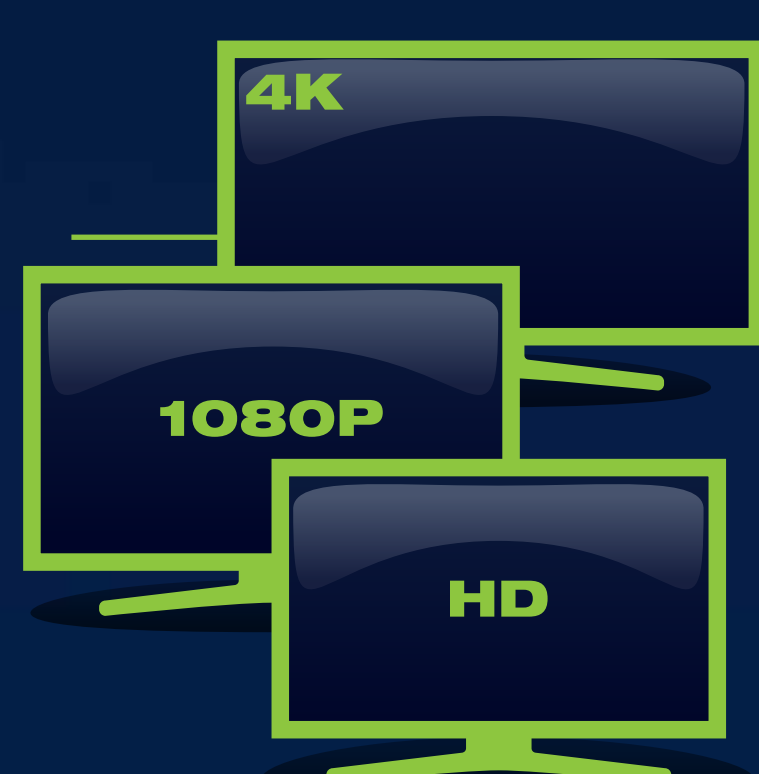

CHOOSING A POCKET PROJECTOR

PORTABILITY

Mini Projectors come in different sizes, prices, shapes customized for various usages like meetings, movie watching or just to project the games on a bigger screen. It's quite clear that a single projector model will not suit for all cases or for everyone.

RESOLUTION

Resolution of the projector tells how quality the image will look like on a screen. It is always a good idea to check the different resolutions the device supports and also if it fits the resolution most frequently used by the user.

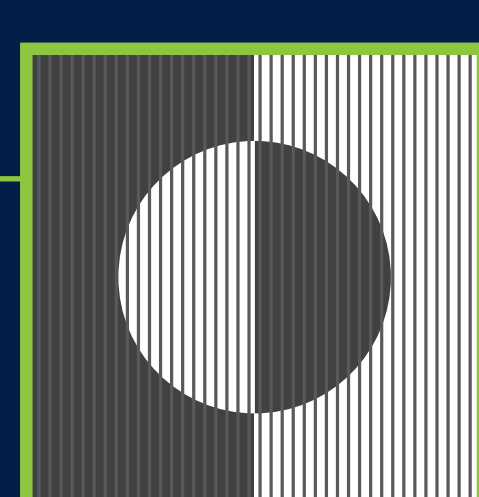

BRIGHTNESS

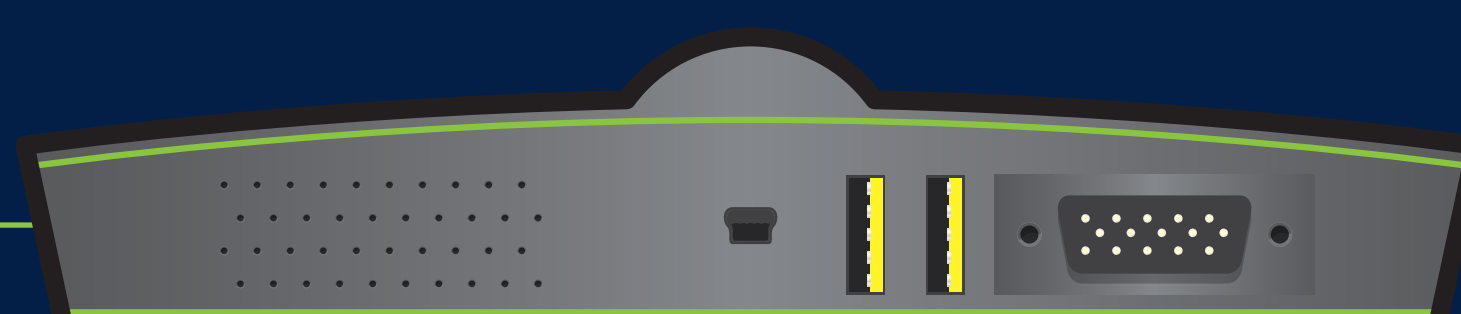

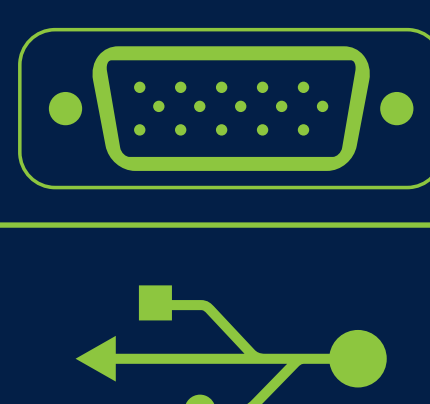

For pocket projectors, the brighter they are the more better it is. These devices have a minimum brightness of 10 Lumens. It lets the user to project an image for broader viewing at 24-in diagonal size in a dark room.

CONTRAST RATIO

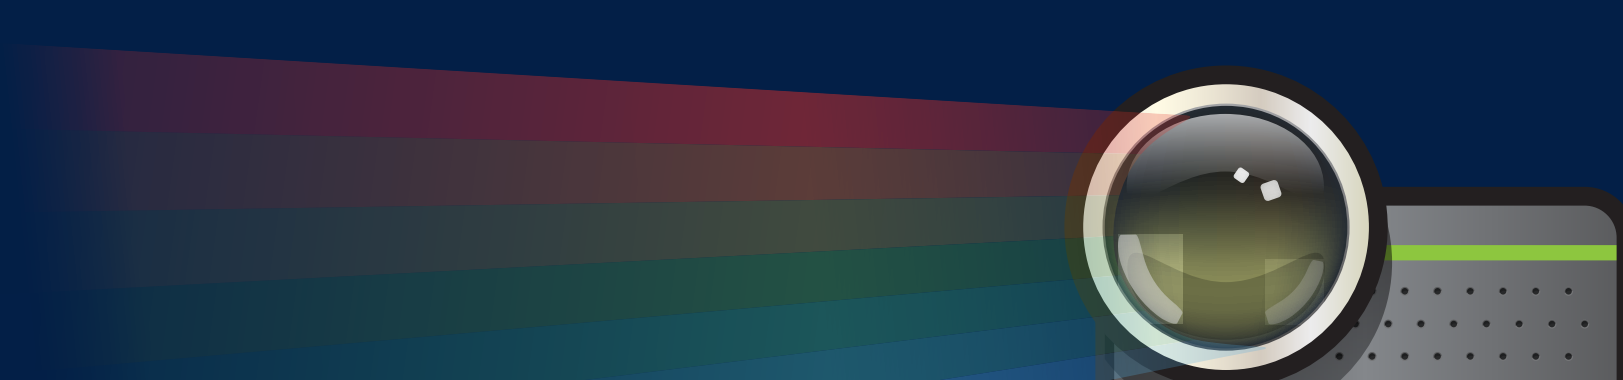

This is the ratio of the brightness between the brightest and the darkest regions produced by the projector. Though, this does not affect the image quality much, it is good to have a reasonable contrast ratio.

CONNECTOR FACILITIES

Pocket projectors come with SVGA connector for analog signals and a composite one for video signals. Some has only composite connectors. You can also check the connectability to iPods or other devices which you frequently use.

TECHNOLOGY USED

These devices use **DLP technology** which causes rainbow effect-splitting of light areas into little rainbows. Other techniques are Laser and LCOS. So, test the device for any such effects before buying.

POCKET PROJECTOR FUN

It can be used to enhance the movie viewing experience and particularly effective when you don't want to spend on large screen television sets.

You can use it outdoors with creative activities such as digital snowflakes and can have a blast with your family.

You can have a musical light show with your projector akin to a laser light show and can celebrate karaoke nights.

You can give awesome presentations literally anywhere without worry about whether the **client's office have compatible projector available.**

You can tell compelling bedtime stories to your little ones with vivid images in their bedroom.
